

# LIS-3353

Computers:  
From numbers  
to thinking

Simplest computer I can think of...

If the British went out by Water, we would shew  
two Lanthorns in the North Church Steeple; and if  
by Land, one, as a Signal.

(Paul Revere)

[izquotes.com](http://izquotes.com)

BINARY system. TWO possible choices

# Binary System

0 and 1

# HUGE CONCEPT #1

*All computers do is “numbers”*

- you put numbers into them
- it messes with the numbers
- it gives you some numbers back

# Charles Babbage

“The whole of arithmetic now appeared within the grasp of mechanism.”

# The Difference Engine

..which is this

# How many light switches..

..would it take to store “what season is it?”

# A minimum of 2:

Winter	OFF-OFF	00
Fall	OFF-ON	01
Spring	ON-OFF	10
Summer	ON-ON	11

# HUGE CONCEPT #1

*All computers do is “numbers”*

- you put numbers into them
- it messes with the numbers
- it gives you some numbers back

(but, you can store **anything** in numbers)

# The first “program?”

Diagram for the computation by the Engine of the Numbers of Bernoulli. See Note G. (page 64 of seq.)																			
Number of operations. Number of operations. Number of operations.	Variable used in operation.	Variable resulting from operation.	Indication of change in the value of the Variable.	Indication of Result.	Working Variables.										Result Variables.

# Ada Lovelace

# From “Difference Engine” to “Analytical Engine”...which...

*'might act upon other things besides number... the Engine might compose elaborate and scientific pieces of music of any degree of complexity or extent.'*

# A minimum of 2:

Winter	OFF-OFF	00
Fall	OFF-ON	01
Spring	ON-OFF	10
Summer	ON-ON	11

THIS SLIDE INTENTIONALLY LEFT  
BLANK –

TOMORROW :  
BINARY

What about “words?”

Let's say, we want to say, “Hi.”

# ASCII (technically not what we use today, but hey...)

## ASCII Code: Character to Binary

				space	0010 0000

H - 01001000

i - 01101001

01001000, 01101001

(or really, just "72,105". More on that later...)

# Images?

# Sound/Music?

- email?
- mp3 file?
- snapchat photo?
- tweet?

ALL NUMBERS.  
ALWAYS “CONVERTIBLE”

# HUGE CONCEPT #1

*All computers do is “numbers”*

- you put numbers into them
- it messes with the numbers
- it gives you some numbers back

(but, you can store **anything** in numbers)

HUGE CONCEPT #1 +  
ANYTHING IN NUMBERS

yields

HUGE(R) CONCEPT #2

## HUGE(R) CONCEPT #2

*All computers do is follow a very precise **list of instructions** that one or more people wrote.*

# Understanding Power

```
10 PRINT "John is AWESOME";  
20 GOTO 10
```

THIS SLIDE INTENTIONALLY LEFT  
BLANK –

TOMORROW :  
BINARY &  
INTELLIGENT COMPUTERS

# Alan Turing

Not Alan Turing but I'll probably check out  
the movie too...

*“Lots of very simple instructions can add up to complex computations.”*

“Turing Machine (Turing Completeness)”

(an infinite tape w/ simple instructions)

*“Lots of very simple instructions can add up to complex computations.”*

**“Lambda Calculus”**

(mathy way to express the above; this is literally all you have to know)

# *A.I. ARTIFICIAL INTELLIGENCE!*

- up for debate but, history tells a lot; I'd suggest people “move the goalposts” a lot.

“Tests”

- games like Chess

or...

# *The Turing Test*

Simplest expression:

Could a computer (typing/chatting online)  
fool a human into thinking it was a human?

*So then...*

AI?
